Good morning Elizabeth,

While recently gathering some numbers for the leadership team, we noticed an issue in our data. We are missing brand information for more than half of our scanned receipts. My team is working to sort out what could be causing the issue.

- Are there known gaps in the ability of our system to associate brands with receipt items?
- Were there any major feature releases recently?

On a related note, we just recently launched a new data model to increase the capabilities of our reporting. Because this model can be affected by product changes, could you please allow my team to assist in QA testing for any major updates engineering plans to do in the future? Our familiarity with the data our product produces would be an asset in looking for bugs.

Lastly, please let us know if you start to notice longer load times for any reporting our team produces. As the company grows and we gather more data, I plan to scale up our technology resources as needed to ensure your reports and requests are processed and received in a timely manner.

Thank you so much for all your help!

Best regards,

Ben
